International Federation of Automatic Control (IFAC)

The *International Federation of Automatic Control*, founded in September 1957, is a multinational federation of National Member Organizations (NMOs), each one representing the engineering and scientific societies concerned with automatic control in its own country.

The purpose of the Federation is to promote the science and technology of control in the broadest sense in all systems, whether, for example, engineering, physical, biological, social or economic, in both theory and application. IFAC is also concerned with the impact of control technology on society.

The primary objective of the Federation is to serve all those concerned with the theory and application of automatic control and systems engineering, wherever situated. To further this aim, it maintains working relationships with other organizations, national or international, especially with other non-governmental professional federations.

The official journals of IFAC are *Automatica*, *Control Engineering Practice*, *Annual Reviews in Control*, the *Journal of Process Control*, *Engineering Applications of Artificial Intelligence*, the *Journal on Mechatronics and Nonlinear Analysis: Hybrid Systems* to which one may subscribe by writing to the publisher, Elsevier Science Ltd.
